| <b>Team ID</b>       | xxxxxx                                |
| <b>Project Name</b>  | A comprehensive measure if well-being |
| <b>Maximum Marks</b> | 5 Marks                               |

### Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

#### Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

### Solution Summary

| Field                                | Details                                                                                                                                                                                                                                                                                                                                                                          |

| <b>Framework(s) Used</b>             | Flask, Scikit-learn, Pandas, NumPy, Matplotlib                                                                                                                                                                                                                                                                                                                                   |
| <b>Key Features Implemented</b>      | User Registration & Login, Well-Being Assessment Questionnaire, Well-Being Index Calculation, Machine Learning-Based Prediction, Personalized Recommendations, Dashboard for Well-Being Scores, PDF Report Generation, Secure Data Storage                                                                                                                                       |
| <b>Pending / Incomplete Features</b> | Integration with wearable devices, Mobile application support, Real-time health API integration                                                                                                                                                                                                                                                                                  |
| <b>Setup / Run Instructions</b>      | <ol style="list-style-type: none"> <li>1. Install Python 3.x.</li> <li>2. Install required packages using <code>pip install -r requirements.txt</code>.</li> <li>3. Configure the database (MySQL/SQLite).</li> <li>4. Run the application using <code>python app.py</code>.</li> <li>5. Open the application in a web browser at <code>http://localhost:5000</code>.</li> </ol> |

### Code Quality Checklist

| S.No | Criteria                                               | Status (Yes / No) |
|------|--------------------------------------------------------|-------------------|
| 1    | Code is modular and organized into functions / classes | yes               |
| 2    | Meaningful variable and function names are used        | yes               |
| 3    | Code includes comments / documentation where necessary | yes               |
| 4    | Error handling is implemented for critical operations  | yes               |
| 5    | The application runs without critical errors           | yes               |
| 6    | Code is committed to a version control repository      | yes               |

### Additional Notes / Comments:

The application follows a modular architecture with separate components for authentication, well-being assessment, machine learning prediction, recommendation generation, and database management. The code adheres to Python coding standards, emphasizes readability and reusability, and is designed for easy maintenance and future enhancements.
