

Solution Requirements

Date	5 july 2026
Team ID	xxxxxxx
Project Name	A Comprehensive measure of well-being
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	<i>[Describe how users will securely log in or verify their identity]</i>	High
2	Authorization levels	<i>[Define the user roles and what access/permissions each role has]</i>	High
3	External interfaces	<i>[Detail any third-party APIs, external databases, or]</i>	High

		<i>services the system must connect to]</i>	High
4	Transaction s processing	<i>[Explain how data exchanges, payments, or core system transactions will be handled]</i>	High
5	Reporting	<i>[Describe the types of reports, dashboards, or data exports the system must generate]</i>	High
6	Business rules, etc.	<i>[List specific logic, constraints, or workflows unique to the business process]</i>	High
7	Compliance to laws or regulations	<i>[Specify any legal, industry, or data privacy standards the system must adhere to (e.g., GDPR, HIPAA)]</i>	High
8	Other	<i>[Add any additional functional requirements here]</i>	Mediumigh

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
------	--------------	-------------------------	-------------------------------------

1	Performance & Speed	The system should quickly calculate well-being scores and load dashboards	Dashboard loads within 2 seconds.
2	Scalability	Supports increasing numbers of users and health data records without performance degradation.	Supports at least 10,000 concurrent users.
3	Security & Data Privacy	Encrypts all personal and health data during storage and transmission.	AES-256 encryption and HTTPS/TLS enabled.
4	Reliability & Availability	The application should remain available with minimal downtime.	99.9% monthly uptime.
5	Usability & Accessibility	User-friendly interface with support for people with disabilities and mobile responsiveness.	WCAG 2.1 AA compliance and responsive design.
6	<i>Other</i>	Maintainable, portable, and easy to update with new well-being indicators and health integrations.	Modular architecture, automated backups, and cross-platform compatibility.
